7 definitions memory card

Read the definition. Say the trick. Do the move. Then cover it and say it again.

Motion

Change in position

Motion means you Change Places → Change in Position

Do it: move your hand from one spot to another.

Acceleration

The rate of change in velocity/speed

Race Car Velocity → Rate of Change in Velocity/speed

Do it: press an imaginary gas pedal. The speed changes.

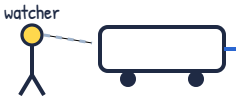

Reference Point

The location of the observer of motion

LOOM → Location Of the Observer of Motion

Do it: point to your own eyes. It's where the watcher is.

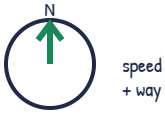

Velocity

Describing a moving object using speed and direction

Dogs Make Our Shoes Dirty → Describing a Moving Object using Speed and Direction

Do it: point a direction while you say a speed. "12 cm/s, that way."

Constant Speed

A speed that does not vary or change

Cruise control: Never Varies, Never Changes → does not vary or change

Do it: glide a flat hand straight across.

Negative Acceleration

When an object's speed decreases

Negative is a downer → speed Decreases (D for Down)

Do it: thumbs down. The car slows to a stop sign.

Positive Acceleration

When an object's speed increases

Positive is a plus → speed Increases (more and more)

Do it: thumbs up. The car pulls away faster and faster.

Learn them in 3 families

- **Where things are:** Motion, Reference Point
- **Speed words:** Velocity, Constant Speed
- **Acceleration words:** Acceleration, Positive, Negative
- Positive and negative use the **same sentence**. Only one word changes: increases or decreases.

Tonight and tomorrow

- Before bed: say all 7 out loud with the moves, then write them once.
- In the morning: cover the definitions and say them from the term.
- At the test: as soon as you get it, write all 7 tricks in the margin first, if your teacher allows it.
